

Water & Wastewater

Software for Water and Wastewater Municipalities

HMI/SCADA Solutions for Public and Private Municipalities

Software suite integrates visualization, alarming, reporting and trending

Manage Multiple Facilities from a Single Location

Access, monitor and control local and remote water facilities

Plug and Play with Popular RTUs, DCSs and PLCs

Industry standard OPC connectivity for fast, easy communications

Display Alarms with Corresponding Live Video

While viewing and responding to alarms, users can view the corresponding live video feed

Create EPA and Regulatory Reports

Publish event or schedule-based reports from multiple data sources in real-time

Historian Logs to Secure Databases

Industry standard databases such as Microsoft® SQL Server®, MSDE, Microsoft Access, and Oracle® aid in record retention

Project Management and Deployment Tools

Easily deploy projects, collaborate, and manage applications

Prevent Problems with Multimedia Alarm Notification

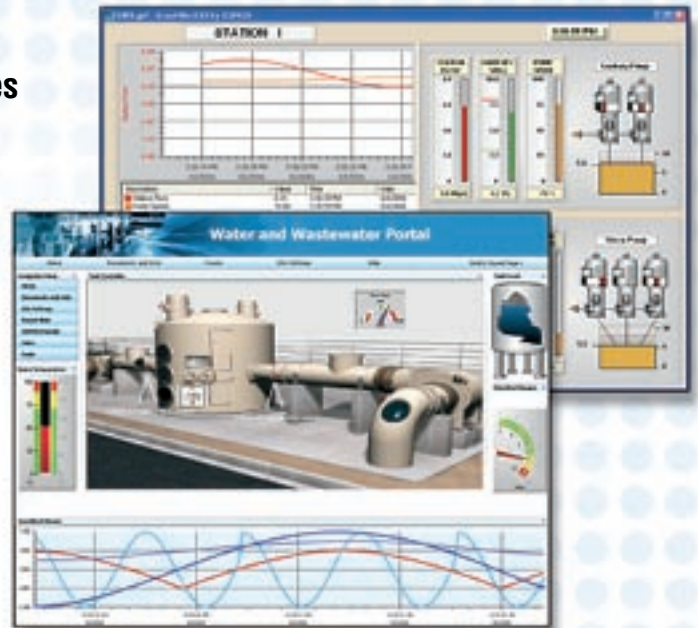

Schedule and deliver operator alerts via e-mail, phone, fax, SMS pagers and more

24/7 Security of Operator Input, Station and Node Details

Automatic tracking and logging of operator actions; trace individual actions with "who, what, when and where" information

Remote Wireless and Mobile Connectivity

Access SCADA information using mobile phones or Pocket PCs

"ICONICS was able to reduce our operational cost while providing us with technology we can grow with."

Ed Rick, System Manager
Town Of Tonawanda Water Resource Department

Visualize Your Enterprise!™

The **ICONICS** suite of applications offers features and functions specifically designed to aid municipalities in complying with local government regulations.

Water and Wastewater Industries Served

For systems requiring superior monitoring and control, the following water and wastewater industries benefit from ICONICS' solutions:

- Water Utilities, Municipalities and Distribution Systems
- Sanitation Systems
- Water Filtration and Remediation
- And Many More . . .

Benefits

Customers who deploy ICONICS solutions in their water and wastewater processing applications enjoy potential benefits:

- EPA and other government reporting
- Centralized monitoring and control
- Ability to integrate alarms with live video, adding a higher level of security to your operation
- Integrated project management equals fewer engineering hours
- Reduce potential problems by viewing alarms and trends anywhere, anytime
- Acknowledge alarms from a wireless Pocket PC or mobile phone

Water & Wastewater

Proven, Innovative Solutions for Water and Wastewater Treatment

Overview

ICONICS' automation software suites provides water and wastewater processing organizations with powerful tools to minimize downtime, reduce costs of operation, minimize applications development and bridge the gap between IT, MIS and water facilities. Monitor, control and report on overall operation from a single location, while connecting satellite and remote sites with secure and reliable networking technologies (LAN, WAN, and the Internet) and recording operator actions, system events and alarms.

HMI/SCADA Solutions for Public and Private Municipalities

Fast and easy integration into your product solutions is achieved using state-of-the-art technology. Fifth generation Web-enabled HMI, SCADA and control software applications can be deployed as a fully integrated suite or as modular components to meet your requirements.

Manage Multiple Facilities from a Single Location

ICONICS' software suites enable the monitoring and control of multiple locations with one software system. Not only can you monitor and access individual locations such as reservoirs and pumping stations, but you can control entire water pipeline networks as well.

Plug and Play with Popular RTUs, DCSs and PLCs

Connect directly to dozens of popular existing PLCs, RTUs, DCSs and other automation equipment for fast communications using open-standard OPC servers. ICONICS software is built from the ground up using OPC technology, and therefore requires no time-consuming tag-database interfaces.

Display and Record Alarms Corresponding with Live Video

Alarm configuration is easy with the alarm and event configuration utility. ICONICS' AlarmWorX32 is a distributed enterprise-wide alarm and events management system, which can display alarms locally or remotely along with live video feeds from the corresponding alarm locations.

Create EPA and Regulatory Reports

Meet EPA and state agency regulatory reporting requirements with custom reports based on real-time events or schedules and taken from multiple real-time data sources and historical databases. Visualize your reports in Microsoft Excel and publish them via e-mail, fax, printing, Web publishing and more. Choose from one of the many supplied templates or create your own.

Historian Logs to Secure Databases

Both the ICONICS AlarmWorX32 Logger and the ICONICS TrendWorX32 Logger record their information to industry standard databases, including Microsoft SQL Server, MSDE, Microsoft Access and Oracle. Using such standard corporate databases facilitates an easy path for long-term maintenance, addressing issues of record and report retrievals throughout the retention period.

Project Management and Deployment Tools

Deploy a project by simply packing it and then unpacking it on the target computer. ICONICS software integrates with Microsoft Visual SourceSafe® technology for accurate project management. Access operations from mobile phones using MobileHMI.NET.

Prevent Problems with Multimedia Alarm Notification

Quickly alert operations, maintenance and purchasing personnel to problems. AlarmWorX32 Multimedia, which is based on OPC Alarm and Events, provides alarm summary reporting and alarm logging to Microsoft® Access, MSDE, Microsoft SQL Server® and Oracle® databases. Connect alarms to e-mail, faxes, telephones, marquees, pagers, instant messaging, SMS, mobile phones and voice systems. Be notified wherever you may be!

24/7 Security Tracking of Operator Input, Station and Node Details

Critical to an organization's security are the maintenance of unique employee user IDs and the association of these IDs with each employee's actions. The ICONICS Security Server offers a wealth of features for maintaining unique IDs. User, station, node and time details for tracked events are logged to secure databases.

Remote Wireless and Mobile Connectivity

Make operators and management more efficient with flexible access to data wherever they are. WebHMI delivers operator and supervisory screens across an Intranet or the Web with full global network security. Deliver the same screen information that operators see on their station consoles to wireless Pocket PCs with Pocket GENESIS.
